

ColoServe

Company Overview

ColoServe is your best choice for San Francisco colocation because we are a division of ServePath, a true 24/7 hosting operation with over 1500 business customers worldwide. Our screaming-fast network™ features multi-homed bandwidth with connections to over 40 networks, all ready to go in a single connection to your equipment.

ColoServe's world-class San Francisco data center was originally built by Worldcom (MCI). As part of San Francisco's largest and fastest growing ISP, we are also able to deliver many services not available from most data centers, such as dedicated server hosting, managed security services, Email filtering, shared Network Attached Storage, and disaster recovery.

Rock-Solid Finances

ColoServe is a division of ServePath, which was founded in January 2001 and has no investors and no equipment leases or debt. We are profitable and have been cash flow positive for each of the past two years. These days, financial infrastructure is a bigger risk to service reliability than facilities infrastructure. All of the bankruptcies of the last few years prove that debt load has been more disruptive than power failures, with many of the largest names in colocation closing facilities or changing hands with little advance notice.

Screaming-Fast Network™

ColoServe operates its own screaming-fast network™, featuring multi-homed bandwidth with connections to over 40 networks. We route traffic over major Tier 1 Internet backbones such as UUNet/MCI, Level 3, NTT/Verio, and AboveNet, with no low-quality bandwidth and plenty of network capacity for maximum reliability and scalability.

Our network also peers with 37+ networks at Switch and Data's PAIX (Peering And Internet eXchange) in Palo Alto, including Yahoo, Microsoft, Cogent/PSinet, Akamai, UltraDNS, CENIC/CalREN2 (University of California system and Stanford), and Japan Telecom. PAIX is the largest Internet Exchange point in the world, where major Telecom carriers, Internet providers, and content networks exchange Internet traffic.

World-Class Facilities

All of our company owners and employees work on the data center raised floor. Great service requires us to be as close as possible to our customers, so we built our offices right on the raised floor in a portion of our new 20,000 square foot data center. With more than a third of our hosting customers outside of the US, we are a true 24/7/365 operation, with System Administrators on-site at all times.

Our data center was by originally built by MCI/WorldCom so we now share generators, power, cooling, and fire suppression infrastructure with MCI. Because local phone service (and therefore 911 service) is routed through the building, it is considered an "essential" facility, with dual 2 Megawatt generators and 20,000 gallons of diesel on site, plus other infrastructure improvements to support the critical operations of the building. With all of the seemingly compelling virtual data center tours and claims from the Web sites of many ISPs, we invite you to come take a look at our facility in person.
